

DANIEL A. SCHNEIDERMAN

Product Manager, AI & Data Products

Fort Lee, NJ | (201) 819-0488 | dschneiderman955@gmail.com | danielschneiderman.com | github.com/schneida1

SUMMARY

Product Manager with 6+ years building data, analytics, and AI products. Own the global ESG reporting platform of the UN Global Compact, used by ~20,000 companies in 160+ countries, and founded BetaWise, an AI health startup built and shipped end-to-end.

EXPERIENCE

Product Manager, Reporting & Data Products | United Nations Global Compact, New York, NY Jul 2024 – Present

- Own strategy, roadmap, and delivery for the global ESG reporting platform used by ~20,000 companies in 160+ countries, processing 16,000+ submissions annually.
- Cut reporting effort by 50%+ and saved an estimated 10,000+ hours by designing, building with AI-assisted development, and launching rules-based prefilling across up to 75% of eligible questions, reaching 65% adoption.
- Lead 0-to-1 development of an AI capability that extracts data from sustainability reports and suggests questionnaire responses, taking it from discovery through pilot and building a locally hosted prototype to de-risk the technical approach.
- Improved reporting data quality by 40% through AI-powered validation rules and automated anomaly detection, strengthening a dataset used by UN partners, governments, and universities.
- Led strategy research with Country Network leaders across global regions, synthesizing ~1,000 pieces of feedback via Python-based friction maps and quadrant analysis; identified post-submission value as the top user pain point.
- Architected the 520+ question multilingual reporting questionnaire in Qualtrics with custom JavaScript and embedded data, and built Node.js middleware connecting it to the Claude API to prefill responses from uploaded PDF reports.
- Own the analytics and data visualization portfolio, including 2026 data viz and peer benchmarking tools on Tableau and Apache Superset; define product metrics and direct data engineering on Snowflake/SQL pipelines.
- Reached 45% adoption of downloadable in-progress drafts, launched after user research surfaced a cross-functional approval bottleneck, letting legal and finance teams review outside the platform.

Founder | BetaWise Dec 2025 – Present

- Founded an AI health startup after identifying an unmet need: people with diabetes have CGM data but struggle to interpret it. Defined the product vision, positioning, and target user, then designed, built, and shipped the product solo.
- Took the product from concept to live beta in one week, owning requirements, UX, front-end, the LLM prompt and response pipeline, and deployment (Claude Code, Git, Netlify).
- Validated the problem through 5 user interviews, launched a beta to 10 users, and used their feedback to set the roadmap: Dexcom API integration, file imports, trend insights, and LLM output refinement.

Project Manager / Business Analyst | Algoworks, New York, NY Dec 2021 – Jul 2024

- Led product discovery, roadmap development, and experience strategy for Fortune 500 clients including Avis Budget Group (QuickPass digital rental) and ADP (RUN Powered by ADP), translating customer research into personas, journey maps, and prioritized roadmaps.
- Managed \$2M–\$5M digital transformation engagements with ~10-person UX/UI and development teams, partnering directly with senior executive stakeholders.

Business Systems Analyst | United Parcel Service (UPS), Parsippany, NJ May 2020 – Dec 2021

- Translated business needs into technical requirements, user stories, and process maps for billing technology initiatives, partnering with architects and engineers on project teams of 10–100.
- Defined requirements and workflows for the Amazon returns experience, supporting technology delivery for a large-scale customer returns initiative.

SKILLS

Product Strategy & Roadmaps, 0-to-1 Product Development, AI/LLM Products, Product Discovery & Customer Research, Prioritization & Backlog Management, Data Products & Analytics, SQL/Snowflake, Python, JavaScript, Qualtrics, Tableau, Apache Superset, AI-Assisted Development (Claude Code)

EDUCATION & CERTIFICATIONS

Pennsylvania State University | B.S., Energy, Business, and Finance; Minor in Entrepreneurship and Innovation 2016 – 2020
SAFe Product Owner / Product Manager Certified, Advanced Scrum Master Certified
