

Daniel A. Schneiderman

PRODUCT MANAGER

Fort Lee, NJ • (201) 819-0488 • dschneiderman955@gmail.com • danielschneiderman.com • github.com/schneida1

SUMMARY

Product Manager with 6+ years of experience across product ownership, product discovery, business systems, and digital transformation. Current scope includes ownership of global ESG reporting, analytics, and data visualization products serving sustainability teams at approximately 20,000 companies, with responsibility for roadmap prioritization, data analysis, and cross-functional delivery across engineering, design, and data engineering. Experienced in translating customer needs, business requirements, and complex datasets into intuitive products that improve adoption, efficiency, and data quality.

CORE PRODUCT CAPABILITIES

Product Strategy & Roadmaps • 0-to-1 Product Development • Product Discovery & Customer Research • Product Definition & Scoping • Prioritization & Backlog Management • Data Products & Analytics • SQL • UX / Journey Mapping

PROFESSIONAL EXPERIENCE

Product Owner, Reporting & Data Products | United Nations Global Compact, New York, NY July 2024 - Present

- **Reporting platform:** Own the roadmap, backlog, requirements, and release priorities for the global ESG reporting experience used by sustainability teams at ~20,000 companies; partner with engineering and design and ship on a three-week release cadence.
- **Data & analytics products:** Own CoP data visualization and analytics tools; lead data analysis, define product metrics and analytical experiences, and manage data engineering teams responsible for the underlying data products and pipelines.
- **Prior-year prefilling:** Launched rules-based response prefilling across up to 75% of eligible questions, achieving 65% adoption and reducing reporting effort by more than 50%.
- **Draft review workflow:** Launched downloadable in-progress drafts after identifying a cross-functional approval bottleneck, enabling reviews by legal, finance, and other stakeholders outside the platform; achieved high adoption and strong user feedback.
- **AI-assisted reporting:** Lead 0-to-1 development of an AI capability that analyzes company sustainability reports and suggests responses, progressing the product from discovery through pilot testing.
- **Data quality:** Improved reporting data quality by 40% through AI-powered validation rules and automated anomaly detection within the CoP questionnaire.

Project Manager / Business Analyst | Algoworks, New York, NY December 2021 - July 2024

- **Product discovery:** Led research, synthesis, roadmap development, and experience strategy for enterprise digital products, translating findings into future-state concepts and prioritized opportunities while managing budgets, timelines, and delivery across ~10-person UX/UI and development teams.
- **Avis Budget Group - QuickPass:** Translated customer research into personas, friction maps, current- and future-state journeys, design direction, and prioritized roadmap opportunities for the digital rental experience.
- **ADP - RUN Powered by ADP:** Translated research into personas, journey maps, friction analysis, design recommendations, and roadmap priorities for the small-business payroll and HR platform.
- **Delivery & stakeholders:** Managed \$2M-\$5M digital transformation engagements and partnered directly with senior Fortune 500 stakeholders to align user needs, business goals, delivery constraints, and executive-ready findings.

Business Systems Analyst | United Parcel Service (UPS), Parsippany, NJ May 2020 - December 2021

- **Billing technology:** Gathered and translated business needs into technical requirements, user stories, and process maps for billing technology initiatives, partnering with architects and engineers across project teams of 10-100 people.
- **Amazon returns:** Supported technology delivery for the Amazon returns experience by defining requirements and workflows for a large-scale customer returns initiative.

INDEPENDENT PRODUCT WORK

Founder & Product Lead | Time in Range Project December 2025 - Present

- **Mission & product vision:** Founded the Time in Range Project to improve access to diabetes support by connecting people with peer mentors and building tools that help users better understand CGM and Time in Range data.
- **BetaWise 0-to-1 build:** Conceived, built, and deployed BetaWise, an AI-enabled product that turns CGM data into trend views and personalized insights; shipped using Claude Code, Git, and Netlify.
- **Discovery & iteration:** Conducted early interviews with target users and launched an initial beta; feedback shaped roadmap priorities including Dexcom API integration, file imports, trend insights, and LLM response refinement.
